VP Engineering & Product · **AI-Native Enterprise Platforms** · **Financial Services & InsurTech**

Summary

Engineering and product executive who scales products and teams from MVP to enterprise production. Most recently served as Vice President of Engineering & Product at Indico Data, where I helped evolve the company's product from a sales demo in 2017 to a widely adopted AI platform for document intake and agentic workflows processing billions of transactions a year. Earlier built financial and identity platforms at GMO (order, trade, and reconciliation systems for a global asset manager) and Amazon (identity, OAuth, and authorization platform).

Highlights

- Grew Indico's engineering organization from 4 to 23 across development, DevOps, QA, and product while cutting R&D spend by $1M+ year over year.
- Delivered Indico Workspaces, an agentic underwriting and claims platform: 5+ accounts, $500K new ARR in 8 months.
- Moved Intake, Indico's document-AI platform, from discriminative deep learning to LLM agents, RAG, and LLM-based evaluation without breaking customer accuracy, isolation, or uptime commitments.

Experience

- **Indico Data** Boston, MA · Apr 2017 – Sep 2026
  Vice President of Engineering & Product

  Document intake and agentic underwriting platform for insurance and financial services.
  Member of the executive team reporting to the CEO. Led a 23-person engineering, DevOps, QA, and product organization, managing engineers directly from 2019. Owned the product roadmap, scoping and estimation, and customer discovery for two enterprise products and acted as the primary product manager.
  - Promoted three times over 9 years, from senior software engineer to VP
  - Player-coach: mentored engineers from junior to principal, promoted several to principal and director, and kept about a quarter of my time hands-on in architecture, code review, and prototypes
  - Architected Workspaces: typed fields with document and agent provenance, human-in-the-loop review, and a closed set of agent actions applied by code, doubling as the prompt-injection defense
  - Led Intake's move from legacy ML to generative AI, with verifier models grounded in citations and reference-data enrichment to curb hallucination; improved retention and conversion
  - Built Intake's LLM evaluation loop and its first metrics: in-platform golden datasets, prompt-version comparison on precision, recall, and F1, and reviewed predictions growing the test set
  - Drove AI-assisted development with the CTO: coding agents (Claude Code, Codex, Cursor, Devin) for every engineer, plus agents in code review, bug analysis, and security scans behind release gates
  - Set a predictable release train and operational-readiness gates; met customer CVE and security SLAs
  - Cut R&D spend by $1M+ YoY via AWS re-architecture and a hybrid US / LatAm / India model
  - Led a company-wide 2026 security audit and rebuild of infrastructure, tooling, and customer isolation
  - Managed DevOps for single-tenant delivery (AWS account and K8s cluster per customer, Terraform, Crossplane) and self-hosted on-prem; observability on OpenTelemetry, Prometheus, and SigNoz
  - One of 4 engineers who re-architected the SaaS API into Intake; built auth, model, dataset services
  - Built the platform's early ML tooling: dataset management in Pandas, baseline classifiers in scikit-learn, and NumPy-based model weight export and serialization for serving, before the move to the generative stack
  - Scaled Intake to billions of documents a year: a real-estate customer at 20,000 title docs/hour, a logistics customer at 15M images/day, and a lender at 180,000 loan renewals/month

- **GMO LLC** Boston, MA · Apr 2015 – Apr 2017
  Senior Software Engineer

  Global investment manager; built trading and portfolio-implementation systems.
  - Designed and built RESTful services and APIs for reference data, trade and order management, and holdings retrieval, plus a single-page web application used by portfolio implementers
  - Built the reconciliation service matching daily orders to executed trades, surfacing exceptions and exposure to portfolio managers
- **Amazon.com, eCommerce Platform Services** Seattle, WA · Jul 2012 – Mar 2015
  Software Development Engineer
  - Developed and maintained the OpenID and OAuth web platform handling identity, authentication, and authorization for all Amazon and mobile applications
  - Led a complete redesign of Amazon's authentication web front-end for the retail site on mobile and desktop worldwide
  - Built the Login with Amazon developer console used by thousands of external developers to register and manage apps on Amazon APIs

Skills

- **Leadership**
  - Engineering organization management, org design, recruiting and hiring, coaching and mentorship, managing managers
  - R&D budgeting, cost optimization, vendor and contract negotiations
  - Agile delivery, SDLC maturity, QA and test strategy, reliability and on-call, secure development, security audits, incident response, AI governance and responsible-AI practices in regulated industries, executive escalation for enterprise incidents
- **Product**
  - Product management, product strategy and vision, roadmap ownership, OKRs, release and capacity planning, requirements/PRDs, backlog prioritization
  - UX and product design, rapid prototyping, customer discovery, positioning, GTM partnership, technical pre-sales, developer experience and API platform design
- **AI / ML**
  - Generative AI: LLM agents and agentic orchestration, MCP servers and tool integrations, RAG, embeddings and vector search, prompt engineering, LLM-based evaluation and golden datasets, guardrails, LLM observability and agent tracing, document intelligence / IDP
  - Classical ML: dataset management, baseline classifiers and evaluation (scikit-learn, Pandas, NumPy), model serialization for serving
- **Technical**
  - Python (FastAPI, SQLAlchemy, Celery, NumPy, Pandas, SciPy, scikit-learn, LangChain, LangGraph), TypeScript/JavaScript (Node.js), Java, C#, Ruby, SQL · PostgreSQL, Redis, Kafka (CDC with Debezium), Weaviate, REST/GraphQL, OAuth 2.0/OIDC/SAML · AWS, GCP, Azure, Kubernetes (K8s), Docker, Terraform, CI/CD, observability · React, Ruby on Rails

Education

- B.Sc. Pure Mathematics (Minor: Business), Florida State University
- Udacity Nanodegrees: Deep Learning Foundations (2017), Deep Reinforcement Learning (2019)
- Languages: English, French
