Summary

Senior engineering leader with 9+ years at Indico Data spanning three major platform re-architectures, promoted from backend engineer to Vice President of Engineering & Product reporting to the CEO. Own engineering and product for two enterprise AI SaaS products serving InsurTech underwriting/claims and financial-services intelligent document processing. Under my leadership, the engineering org migrated to a full generative-AI stack (LLM agents, RAG, evaluation, document intelligence) and shipped an agentic InsurTech underwriting and claims application. Hands-on with design, architecture, and complex customer-facing engineering. Prior: GMO trading systems, Amazon identity/OAuth platform.

Experience

- **Indico Data** Boston, MA · Jun 2022 – Present
Vice President of Engineering & Product
 - Report directly to the CEO; lead a 23-person organization with 6 direct reports (4 directors, principal engineer, TPM) covering Workspace, Intake, DevOps, QA, and product operations, and own roadmap and delivery for two enterprise products serving InsurTech underwriting/claims and financial-services intelligent document processing
 - Doubled as primary product manager across Workspace, Intake, and DevOps since 2024 after a company-wide RIF eliminated the product function; own discovery and roadmap, partner with SVP Marketing and Senior Product Marketing on positioning, and participate in InsurTech industry events (ITC Vegas, InsurTech Insights NY/London); grew Workspace to the company's fastest-growing product line – 5+ new accounts and \$500K new ARR in the last 8 months
 - Defined and priced a \$500K, 12-month extended-support contract with a top Intake customer, partnering with Customer Success on scope clarification and negotiation, expanding recurring revenue on a mature account
 - Partnered with R&D to integrate a generative-AI stack (LLM agents, RAG, LLM-based evaluation, document intelligence) into the platform as a full alternative to the existing discriminative deep-learning stack, delivered across both products
 - Led the two-year design and development of Workspace, an agentic insurance application for underwriting and claims that layers event-driven orchestration and an agent loop over Intake to autonomously process submissions and claims end-to-end
 - Executed a zero-cost engineering rebalancing in 2026 under tight budget constraints: shifted capacity to Workspace to fuel growth, moved Intake to a stability-and-maintenance cadence, and aligned headcount with product lifecycle
 - Reduced R&D spend by \$1M+ year-over-year while growing customers and processing volume, via AWS infrastructure re-architecture and a hybrid US / LatAm nearshore / India-QA delivery model with specialist contractors
 - Coordinated cross-functional response to a major security incident, directing audit, infrastructure rebuild, and recovery across engineering, DevOps, and security teams
- **Indico Data** Boston, MA · Apr 2017 – Jun 2022
Sr Software Engineer, Backend (2017–2019) → Software Engineering Manager, Backend (2019–2021) → Sr Director of Platform Engineering (2021–2022)
 - Joined a 4-engineer team and helped drive the re-architecture of Indico's SaaS API product into Intake, the document-processing platform still in production today; personally designed and built core services (authentication, permissioning, model management, dataset and label-storage) that set the base application structure

- Promoted through IC to backend engineering manager and Senior Director of Platform Engineering; led the backend team, added QA scope mid-tenure, and established hiring, code-review, release, and on-call practices as Indico scaled from early-stage to production enterprise SaaS
- **GMO LLC** Boston, MA · Apr 2015 – Apr 2017
Senior Software Engineer
 - Designed and built RESTful services and APIs for reference data, trade and order management, and holdings retrieval, plus a single-page web application used by portfolio implementers
 - Championed and implemented an automated release process, reducing release cycle from 4 weeks to 1 week
 - Built reusable cross-cutting components and a shared web-component library to reduce effort for new microservices and data-rich internal applications
- **Amazon.com, eCommerce Platform Services** Seattle, WA · Jul 2012 – Mar 2015
Software Development Engineer
 - Developed and maintained the OpenID and OAuth web platform handling identity, authentication, and authorization for all Amazon and mobile applications
 - Led a complete redesign of Amazon’s authentication web front-end for the retail site on mobile and desktop worldwide
 - Built the Login with Amazon (OAuth) developer console used by thousands of external developers to register, configure, and monitor applications consuming Amazon.com APIs

Skills

- **Leadership**
 - Engineering organization management, org design, hiring, mentorship, managing managers
 - Product management, roadmap ownership, customer discovery, positioning, GTM partnership, technical pre-sales
 - SDLC maturity, secure development, incident response, manager on-call for enterprise SaaS; hybrid US / LatAm nearshore / offshore QA delivery models
- **AI / ML**
 - Generative AI, LLM agents, agentic orchestration, RAG (pgvector), LLM-based evaluation, document intelligence, intelligent document processing (IDP)
- **Languages**
 - Python, TypeScript, JavaScript, Java, C#, SQL, Bash
- **Backend & Data**
 - PostgreSQL, pgvector, Redis, Kafka, Celery, REST APIs, GraphQL, microservices, OAuth 2.0 / OIDC, SAML 2.0, RBAC
- **Cloud & Infrastructure**
 - AWS (Lambda, SQS, SNS, ALB, NLB, WAF, IRSA), GCP, Azure, Docker, Kubernetes, Terraform, Crossplane, CI/CD, observability (Prometheus, Grafana, SigNoz)
- **Frontend**
 - React, Node.js, WebGL

Education

- B.Sc. Pure Mathematics (Minor: Business), Florida State University, August 2009
