VP Engineering & Product · Enterprise AI/SaaS · InsurTech & Financial Services

Summary

An experienced leader who can scale products and teams from MVP to enterprise scale production. Most recently served as Vice President of Engineering & Product at Indico Data, where I helped evolve the company's product from a sales demo in 2017 to a widely adopted document processing platform that processes billions of transactions per year. Acquired a solid foundation in engineering best practices through earlier roles at Amazon and GMO trading systems.

Highlights

- Promoted from backend engineer to VP of Engineering & Product over 9 years at Indico Data.
- Led the design and delivery of Indico Workspaces, an agentic insurance application, that processes underwriting submissions and claims end-to-end. Grew Workspaces into the company's fastest-growing product line with 5+ new accounts and $500K new ARR in 8 months.
- Migrated Intake, Indico's well-reviewed enterprise Intelligent Document Processing platform, from a discriminative deep-learning stack to a full generative-AI stack (LLM agents, RAG, evaluation).
- Helped to grow and mature Indico's engineering team from 4 people into a well run team of 23, delivering enterprise products to highly demanding customers.

Experience

- **Indico Data** Boston, MA · Apr 2017 – Sep 2026
  Vice President of Engineering & Product

  Enterprise AI SaaS + on-prem IDP for insurance underwriting/claims and financial services.

  Member of the executive team reporting to the CEO. Led a 23-person engineering, DevOps, QA, and product organization, managing directors, engineering managers, and principal engineers. Owned the product roadmap, R&D budget, and customer discovery for two enterprise products and acted as the primary product manager.

  – Led the design and build of Indico Workspaces, an agentic insurance intake solution that autonomously processes underwriting submissions and claims end-to-end
  – Grew Workspaces into the company's fastest-growing product line with 5+ new accounts and $500K new ARR in 8 months
  – Led the transformation of Indico's core Intake product from a legacy ML-based tech stack to a modern generative-AI stack (LLM agents, RAG, evaluation, document intelligence), improving both customer retention and prospect conversion
  – Drove agentic transformation in engineering (with CTO — coding/review/log/ticket agents) and product (Claude co-prototyping replaced Figma; requirement/roadmap agents)
  – Continuously improved engineering process and introduced a fixed 6-week release cadence to improve release predictability and hit customer CVE/security SLAs
  – Reduced R&D spend by $1M+ YoY while growing customers and processing volume, via AWS re-architecture and a hybrid US / LatAm / India delivery model
  – Partnered with Sales and Customer Success on multiple upsell and expansion opportunities; largest was a $500K, 12-month full extended-release-support contract with a top account
  – Worked closely with Marketing to inject customer and market feedback into product positioning; represented the company at multiple events including ITC Vegas and InsurTech Insights NY/London
  – Directed the technical streams of a company-wide response to a major security incident earlier in 2026; Indico received high praise from customers for its transparent and swift response

  - As an early engineer, was one of 4 engineers who re-architected Indico's SaaS API into Indico Intake; personally built core services (authentication, permissioning, model management, dataset and label storage) that set the base application structure
  - Intake grew into an Intelligent Document Processing platform handling billions of documents a year: one real-estate customer processes US title documents at up to 20,000 docs/hour, a logistics customer 15M images/day, and a lender 180,000 loan renewals/month
  - Scaled the backend team as it grew from 4 engineers to the 23-person org later led as VP; established hiring, code-review, release, on-call, and QA practices

- **GMO LLC** Boston, MA · Apr 2015 – Apr 2017
  Senior Software Engineer

  Global investment manager; built trading and portfolio-implementation systems.
  - Designed and built RESTful services and APIs for reference data, trade and order management, and holdings retrieval, plus a single-page web application used by portfolio implementers
  - Championed and implemented an automated release process, reducing release cycle from 4 weeks to 1 week
  - Built reusable cross-cutting components and a shared web-component library to reduce effort for new microservices and data-rich internal applications

- **Amazon.com, eCommerce Platform Services** Seattle, WA · Jul 2012 – Mar 2015
  Software Development Engineer

  eCommerce Platform Services — identity, authentication, and authorization platform.
  - Developed and maintained the OpenID and OAuth web platform handling identity, authentication, and authorization for all Amazon and mobile applications
  - Led a complete redesign of Amazon's authentication web front-end for the retail site on mobile and desktop worldwide
  - Built the Login with Amazon (OAuth) developer console used by thousands of external developers to register, configure, and monitor applications consuming Amazon.com APIs

Skills

- **Leadership**
  - Engineering organization management, org design, recruiting and hiring, coaching and mentorship, managing managers
  - R&D budgeting, cost optimization, vendor and contract negotiations
  - Agile delivery, SDLC maturity, secure development, incident response, executive escalation point for enterprise incidents

- **Product**
  - Product management, product strategy and vision, roadmap ownership, OKRs, release and capacity planning, requirements/PRDs, backlog prioritization
  - UX and product design, rapid prototyping, customer discovery, positioning, GTM partnership, technical pre-sales

- **AI / ML**
  - Generative AI, LLM agents, agentic orchestration, RAG, LLM-based evaluation, document intelligence, intelligent document processing (IDP)
  - AI-assisted development: coding agents (e.g., Claude Code), agent harnesses, AI design and prototyping tools

- **Technical**
  - Python (FastAPI, SQLAlchemy, Celery), TypeScript/JavaScript (Node.js), Java, C#, Ruby, SQL · PostgreSQL, Redis, Kafka (CDC with Debezium), REST/GraphQL, OAuth 2.0/OIDC/SAML · AWS, GCP, Azure, Kubernetes (K8s), Docker, Terraform, CI/CD, observability · React, Ruby on Rails

Education

- B.Sc. Pure Mathematics (Minor: Business), Florida State University
