VP Engineering & Product · Enterprise AI/SaaS · InsurTech & Financial Services

Summary

Engineering and product executive who scales platforms from early-stage to production enterprise SaaS, most recently as Vice President of Engineering & Product at Indico Data reporting to the CEO. Led a re-platforming to a generative-AI stack (LLM agents, RAG, evaluation, document intelligence) and delivered an agentic InsurTech underwriting and claims application on top of it. Hands-on with architecture and customer-facing engineering across three major platform re-architectures over nine years. Prior: GMO trading systems, Amazon identity/OAuth platform.

Highlights

- Promoted from backend engineer to VP of Engineering & Product over 9 years at Indico Data, reporting to the CEO
- Grew Workspace into the company's fastest-growing product line: 5+ new accounts and \$500K new ARR in 8 months
- Reduced R&D spend \$1M+ year-over-year while growing customers and processing volume
- Led design and delivery of an agentic insurance application that processes underwriting submissions and claims end-to-end
- Migrated an enterprise platform from a discriminative deep-learning stack to a full generative-AI stack (LLM agents, RAG, evaluation)

Experience

- **Indico Data** Boston, MA · Jun 2022 – Sep 2026
Vice President of Engineering & Product
Enterprise AI SaaS + on-prem IDP for insurance underwriting/claims and financial services.
Led a 23-person engineering and product organization (6 direct reports: 4 directors, principal engineer, TPM) across Workspace, Intake, DevOps, QA, and product operations. Owned roadmap, discovery, and delivery for two enterprise products; acted as primary product manager after the 2024 RIF eliminated the product function.
 - Grew Workspace into the company's fastest-growing product line – 5+ new accounts and \$500K new ARR in 8 months
 - Defined and priced multiple Intake support-expansion deals with Customer Success; largest was a \$500K, 12-month full extended-release-support contract with a top account
 - Reduced R&D spend by \$1M+ YoY while growing customers and processing volume, via AWS re-architecture and a hybrid US / LatAm / India delivery model
 - Led design and build of Workspace, an agentic app that layers event-driven orchestration and an agent loop over Intake to autonomously process underwriting submissions and claims end-to-end
 - Partnered with R&D to integrate a generative-AI stack (LLM agents, RAG, evaluation, document intelligence) as an alternative to the discriminative DL stack across both products
 - Rebalanced engineering capacity within a flat budget in 2026: shifted headcount to Workspace to fuel growth and moved Intake to a stability cadence
 - Drove agentic transformation in engineering (with CTO — coding/review/log/ticket agents) and product (Claude co-prototyping replaced Figma; requirement/roadmap agents)
 - Owned product positioning with SVP Marketing and Product Marketing; represented the company at ITC Vegas and InsurTech Insights NY/London

- Ran a 6-week release cadence to hit customer CVE/security SLAs, and directed cross-functional response to a major security incident (audit, rebuild, recovery)
- **Indico Data** Boston, MA · Apr 2017 – Jun 2022
Senior Software Engineer, Backend (2017–2019) → Software Engineering Manager, Backend (2019–2021) → Senior Director of Platform Engineering (2021–2022)
 - Joined a 4-engineer team and helped re-architect Indico’s SaaS API into Intake, the document-processing platform still in production; personally designed and built core services (authentication, permissioning, model management, dataset and label storage) that set the base application structure
 - Promoted through IC to backend engineering manager and Senior Director of Platform Engineering; led the backend team as it grew alongside Indico from a 4-engineer group toward the 23-person org later led as VP, added QA scope mid-tenure, and established hiring, code-review, release, and on-call practices
- **GMO LLC** Boston, MA · Apr 2015 – Apr 2017
Senior Software Engineer
Global investment manager; built trading and portfolio-implementation systems.
 - Designed and built RESTful services and APIs for reference data, trade and order management, and holdings retrieval, plus a single-page web application used by portfolio implementers
 - Championed and implemented an automated release process, reducing release cycle from 4 weeks to 1 week
 - Built reusable cross-cutting components and a shared web-component library to reduce effort for new microservices and data-rich internal applications
- **Amazon.com, eCommerce Platform Services** Seattle, WA · Jul 2012 – Mar 2015
Software Development Engineer
eCommerce Platform Services — identity, authentication, and authorization platform.
 - Developed and maintained the OpenID and OAuth web platform handling identity, authentication, and authorization for all Amazon and mobile applications
 - Led a complete redesign of Amazon’s authentication web front-end for the retail site on mobile and desktop worldwide
 - Built the Login with Amazon (OAuth) developer console used by thousands of external developers to register, configure, and monitor applications consuming Amazon.com APIs

Skills

- **Leadership**
 - Engineering organization management, org design, hiring, mentorship, managing managers
 - Product management, roadmap ownership, customer discovery, positioning, GTM partnership, technical pre-sales
 - SDLC maturity, secure development, incident response, executive escalation point for enterprise incidents
- **AI / ML**
 - Generative AI, LLM agents, agentic orchestration, RAG (pgvector), LLM-based evaluation, document intelligence, intelligent document processing (IDP)
- **Technical**
 - Python, TypeScript/JavaScript, Java, SQL · PostgreSQL/pgvector, Redis, Kafka, REST/GraphQL, OAuth 2.0/OIDC/SAML · AWS, GCP, Azure, Kubernetes, Docker, Terraform, CI/CD, observability · React, Node.js

Education

- B.Sc. Pure Mathematics (Minor: Business), Florida State University
